Infrared Cameras

The most portable infrared online camera

- Temperature measurement -20°C to 1500°C
- Small cameras - Ideal for OEM applications
- Up to 128 Hz for fast processes
- Including software package and open drivers

NEW: High resolution of 382 x 288 pixels

Innovative Infrared Technology

Automatic hot spot detection

Objects can be examined thermally and **hot or cold positions** (hot or cold spots) can be found automatically.

*Measurement field of the thermal imager*
optris PI as an example with the standard lens 23° x 17°

Fast measurements

Temperature distributions at surfaces can be captured precisely within a **millisecond intervall**.

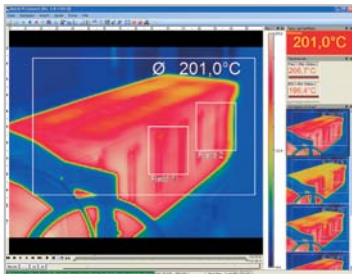

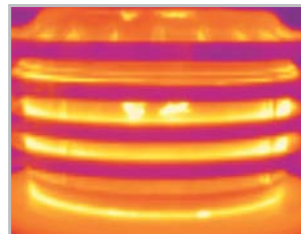

*A milk drop falls into a coffee cup*

Portable and stationary

The cameras fill the existing gap between **portable** infrared snap shot cameras and pure **stationary** devices. Possible applications are for example:

Process automation

Test stations

Research & Development

Portable measurement tasks

Easy process integration

Advanced interface concepts allow the integration within networks and automated systems:

- USB cable extension up to 100 m (over Ethernet) or 10 km (over fibre)

- Process interface (PIF) at the camera as analog input / output (0 to 10 V) and digital input (low- and high-level)

- Software interface via Dynamic-link Library (DLL), Computer-Port (ComPort) and LabVIEW

USB 2.0 over 10km
(Singlemode Fiber Optics)

optris® PI160
Thermal imager with 120 Hz frame rate

PI160
2950.00 €
incl. software & drivers

Important Features

- Outstanding price-performance ratio

- Detector with 160 x 120 pixel

- Thermal images in real time with up to 120 Hz

- Very good thermal sensitivity starting from 80 mK

- Small design (Size: 45 x 45 x 62 mm^3)

- Industrial accessories

- Thermo Analysis Kit incl. 3 lenses (optional)

Small camera - Ideal for OEM applications

Size in mm

Industrial Accessories

The infrared cameras are available with a housing with **protection class IP 67 (NEMA-4)**. The use of the device takes place at the following temperatures...

- ... up to **50°C** without cooling housing
- ... up to **100°C** with cooling housing (air cooling)
- ... up to **240°C** with cooling housing (water cooling)

Additional industrial accessories is available, such as **USB high temperature cables** up to 20 m and mounting systems.
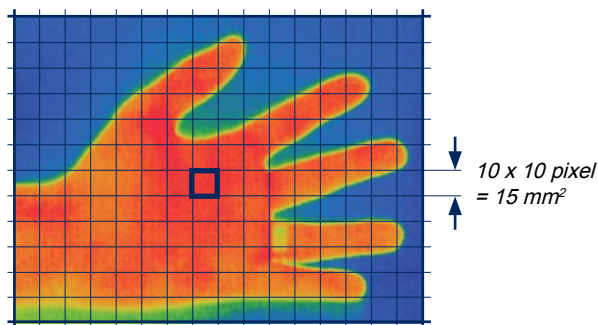

Tested at $T_{amb} = 240°C$

Cooling housing with air and water cooling option

Fitting lenses for each distance

Hand as device under test
Measuring field size: 240 mm x 180 mm, pixel size: 1.5 mm

10 x 10 pixel = 15 mm^2

Same measurement field size
using different lenses:

- Standard lens: 0.6 m measuring distance

- Tele lens: 2.13 m measuring distance

- Wide angle lens: 0.27 m measuring distance

Calculation of accurate measurement fields at our website http://www.optris.com/optics-calculator.

optris® **PI200**
Themal imager with BI-SPECTRAL technology

PI200
3900,00 €
inkl. Software & Treiber

- **NEW**: BI-SPECTRAL technology

- Thermal images in real time with up to 128 Hz (160 x 120 pixel)

- Time synchronic visual image recording with up to 32 Hz (640 x 480 pixel)

- Low-light-level technology of visual camera

- Small design (Size: 45 x 45 x 62 mm^3)

- Thermo Analysis Package incl. 3 lenses (optional)

BI-SPECTRAL technology

With the help of BI-SPECTRAL technology, a **visual image** (VIS) can be combined with a **thermal image** (IR). Both can be finally captured time synchronously:
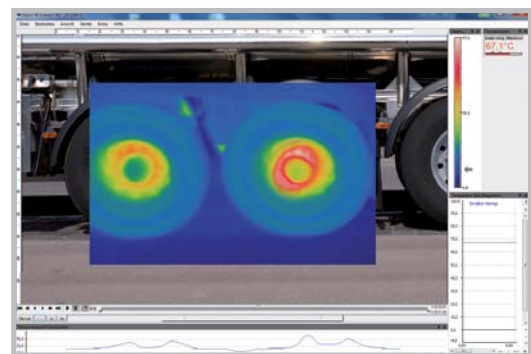

Monitoring modus:
Easy orientation at point of measurement by separate display of visual image
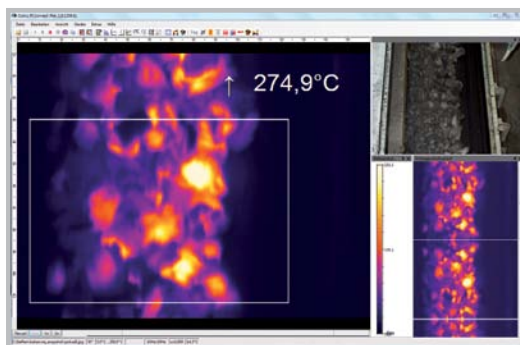

Monitoring of coal on conveyor belt
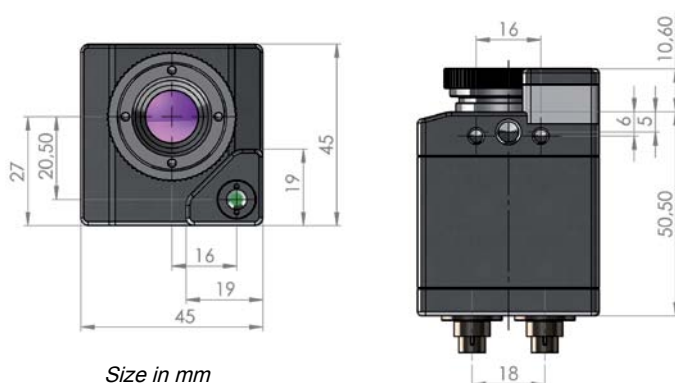

Cross-fading modus:
Highlighting of critical temperatures by cross-fading (0…100% transparency) ...

Measurement of break temperatur in cross-fading modus

... or by cross-fading defined temperatures (thresholds)

Cross-fading of VIS image above temperatures of 35°C

Two cameras in one compact device

*Size in mm*

optris® PI400 / PI450
Themal imager with 382 x 288 pixels

Important Features

- **NEW**: Detector with 382 x 288 pixels

- Fast real-time thermal imager with up to 80 Hz

- Very high thermal sensitivity with 80 mK (PI400) and 40 mK (PI450)

- Smallest camera in its class (46 x 56 x 90 mm³)

- Lightweight (320 g incl. optics)

- Exchangeable lenses & industrial accessories

PI400
4950.00 €
incl. software & drivers

Smallest camera in its class

M 4
6 mm deep

1/4"- 20 UNC
6 mm deep

34 - 38
(focus depending)

Size in mm

80 Hz data capturing with high resolution

The camera displays and stores thermal images with high resolution (382 x 288 px) at full frame rate of 80 Hz (80 images per second).

Thermal image of preforms used in PET bottle production

High resolution to measure smallest details

SMD part as measurement object:
Size of part: 32 mm x 24 mm, pixel size: 0.08 mm

382 pixels

288 pixels

10 x 10 pixels = 0.8 mm²

4 times higher resolution

Accurate measurement field sizes can be calculated online http://www.optris.com/optics-calculator.

160 pixels

120 pixels

10 x 10 pixels = 2 mm²
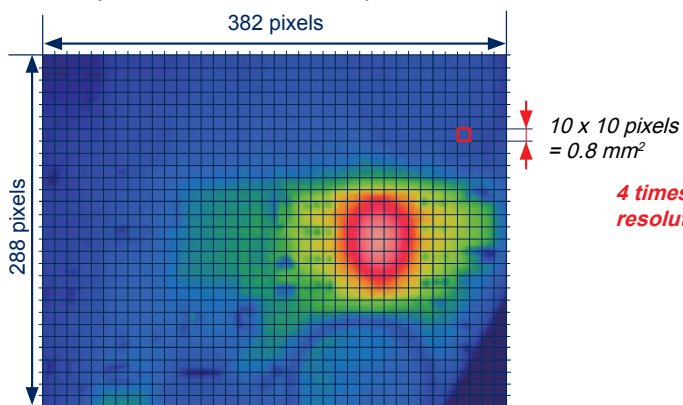

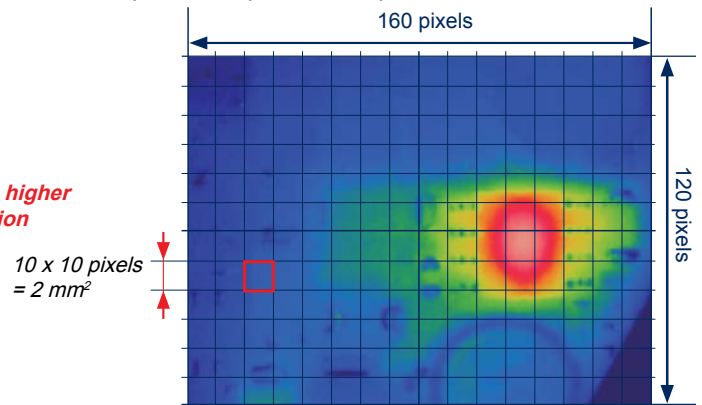

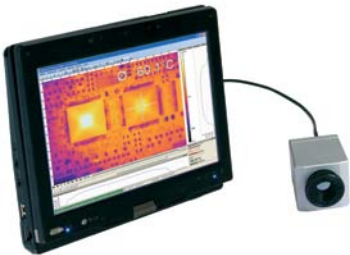

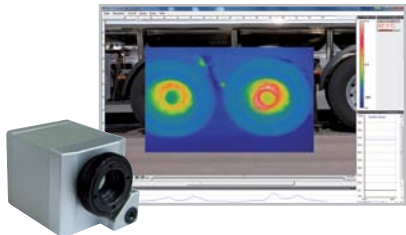

Comparison of 382 x 288 pixels and 160 x 120 pixels detector. At higher resolution, 4 times more pixels can be used for measurement.

| Basis model	PI160	PI200

Accessory for optris PI thermal imagers

Cooling housing and mounting angle, adjustable in two axes*

Mounting flange, for cooling housing*

High temperature USB cable

Mounting base for camera and protective housing (stainless steel), adjustable in two axes

Angular connector

Not for PI200 (BI-SPECTRAL camera version)

Extensive infrared camera software

- No additional costs
- No restrictions in licencing
- Modern software with intuitive user interface
- Remote control of camera via software
- Display of multiple camera images in different windows
- Compatible with Windows XP, Vista and 7 as well as LabVIEW*

Temperature data analysis and documentation

- Triggered data collection
- Radiometric video sequences (*.ravi)
- Radiometric snapshots (*.jpg,*.tiff)
- Text files including complete temperature information for analysis in Excel (*.csv, *.dat)
- Data with color information for standard programs such as Photoshop or Windows Media Player (*.avi, *.jpg, *.tiff)
- Data transfer in real time to other software programmes via LabVIEW, DLL or Comport interfaces
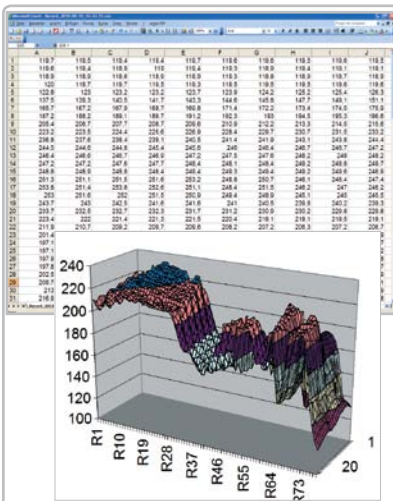

Automatic process and quality control

- Individual setup of alarm levels depending on the process
- BI-SPECTRAL process monitoring (IR and VIS) for easy orientation at point of measurement
- Definition of visual or acoustic alarms and analog data output via the process interface
- Analog and digital signal input (process parameter)
- External communication of software via Comports, DLL and LabVIEW driver
- Adjustment of thermal image via reference values
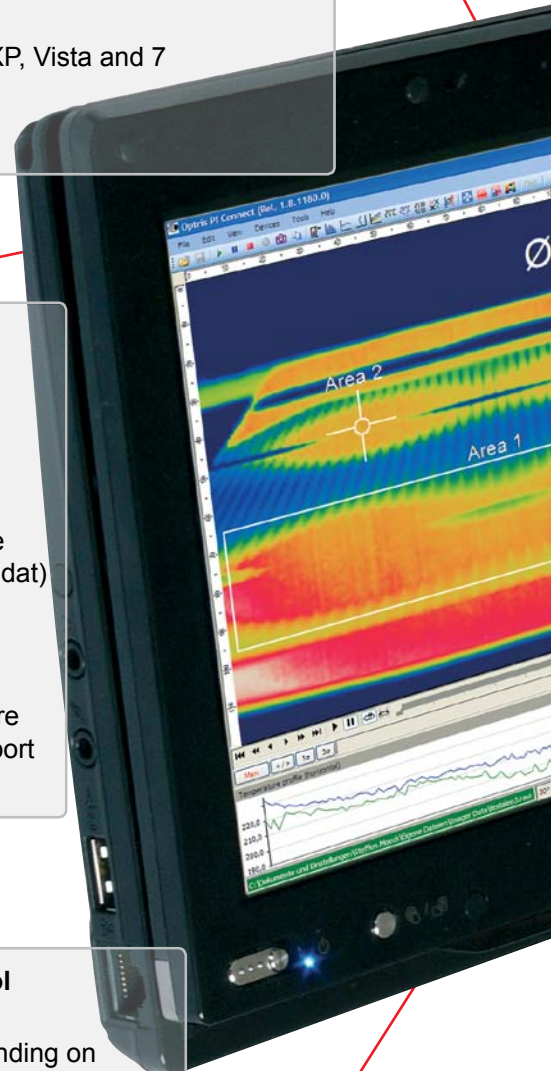

High level of individualization for customer specific display

2.

- Different layout options for an individual setup (arrangement of windows, toolbar)
- Temperature display in °C or °F
- Various language options including a translation tool
- Range of individual measurement parameter fitting for each application
- Adaption of thermal image (mirror, rotate)
- Individual start options (full screen, hidden, etc.)
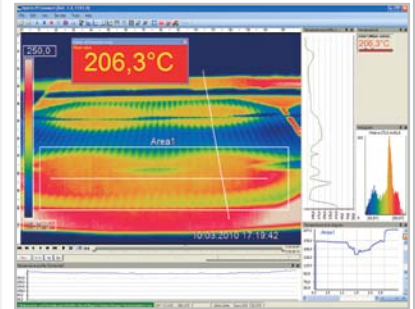

Video recording and snapshot function (IR or BI-SPECTRAL)

3.

- Recording of video sequences and detailed frames for further analysis or documentation
- BI-SPECTRAL video analysis (IR and VIS) in order to highlight critical temperatures
- Adjustment of recording frequency to reduce data volume
- Display of snapshot history for immediate analysis
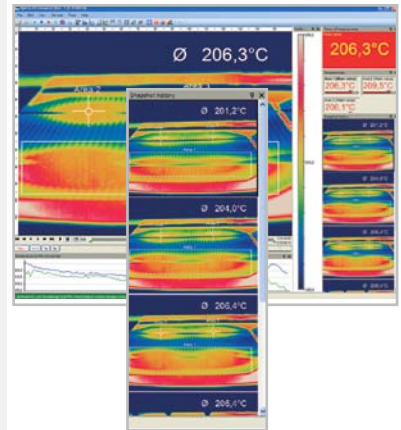

Extensive online and offline data analysis

4.

- Analysis supported by measurement fields, automatic hot and cold spot searching
- Real time temperature information within main window as digital or graphic display
- Logic operation of temperature information (measurement fields and image substraction)
- Slow motion repeat of radiometric files and analysis without camera being connected
- Editing of sequences such as cutting and saving of individual images
- Various color palettes to highlight thermal contrasts
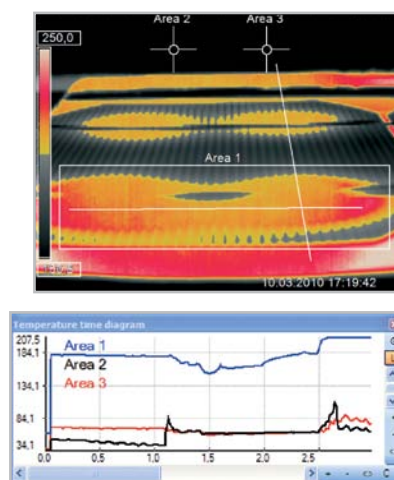

Example pictures: String soldering at solar cells
*Windows is a registered trademark of Microsoft Corporation. LabVIEW is a registered trademark of National Instruments.

The optris PI Connect software comes with a linescanner function. The linescanner mode is generally used for **processes with moving objects** under test, such as measurement of rotary kilns or measurement of great lots at conveyor belts (batch process).

Overview of the advantages:

1. Simple monitoring of process with limited optical access

2. Indirect visualization of heat distribution within ovens via camera installation at the oven exit

3. Extension of number of pixel from 160 pixel up to 200 pixel through use of picture diagonal

4. Up to 128 Hz data recording of unlimited lines which in turn can produce thermal images of any resolution

5. Up to 100° FOV as a line for detailed process analysis such as at wide conveyor belts

Application example: Rotary kiln within the chemical industry
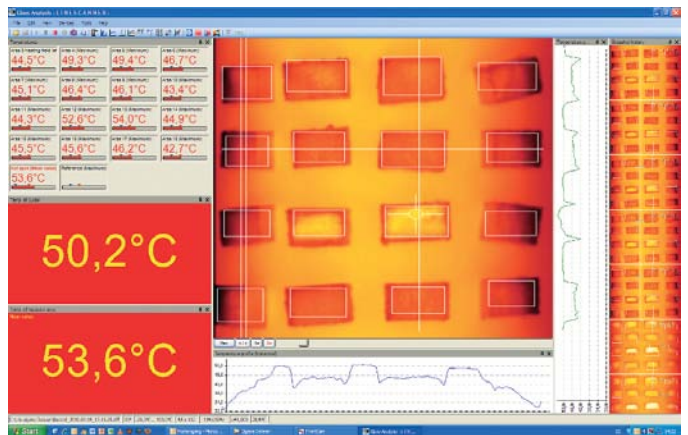

Layout example of linescanner function display
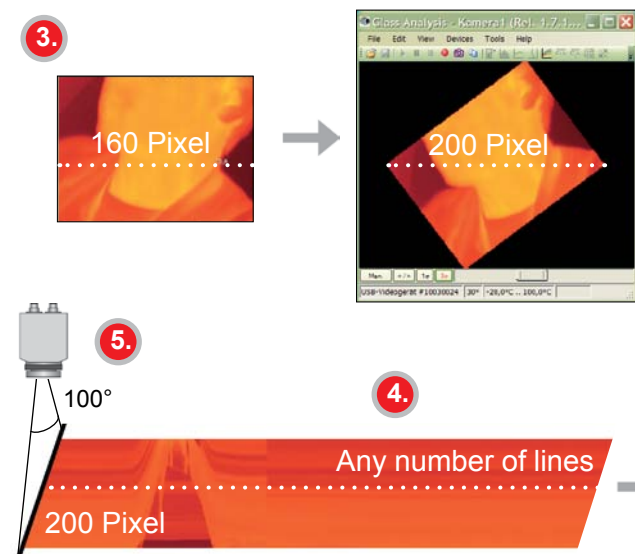

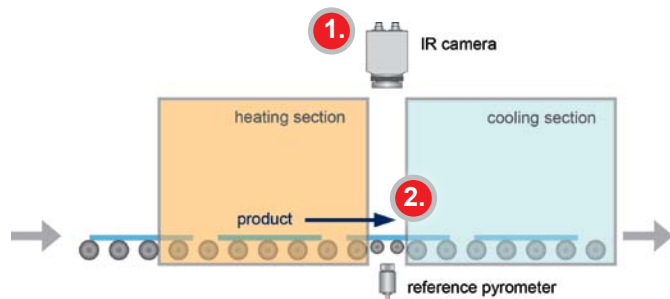

Only three steps to initialize the function:

Step 1:

Activate the linescanner function and define the position of the line in the thermal image. The camera itself can be used for adjustment.

Step 2:

Setup of the linescanner function e.g. the number of displayed lines or the trigger definition for automatic picture storage.

Step 3:

Definition of individual layouts e.g. display of stored images in a snapshot history.

The variety of different lenses offers the possibility to precisely measure objects in **different distances**. We offer lenses for close, standard distances and large distances.
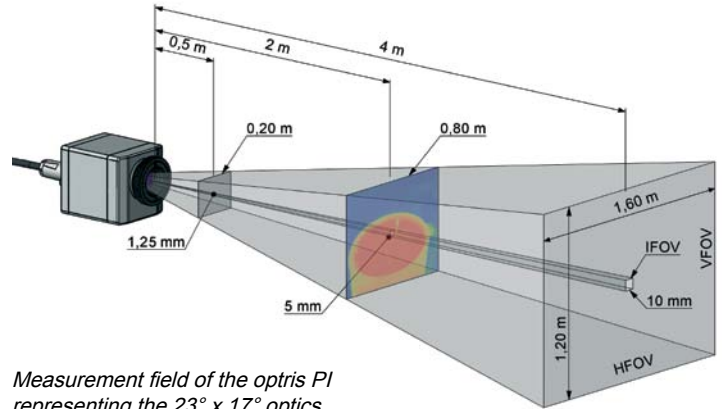

Different parameters are important if using infrared cameras. They display the connection between the distance of the measured object and the size of the pixel. When choosing a lens, the following datas should be considered:

- **HFOV**: Horizontal enlargement of the total measuring field at object level
- **VFOV**: Vertical enlargement of the total measuring field at object level
- **IFOV**: Size of the single pixel at object level
- **MFOV**: Recommended, smallest measured object size of 3 x 3 pixel

Accurate measurement field sizes can be calculated online http://www.optris.com/optics-calculator.

Measurement field of the optris PI representing the 23° x 17° optics

PI160/200 (160 x 120 px)	Focal Length	Minimum Distance		Distance to object [Meas. field in m, pixel in mm]
